ROTO-Rural Construction of Toilets

This is the website based project used for construction of toilets in rural areas. Our aim is to achieve all over India open defecation free and to make women and children free from infectious diseases like cancer. Here users and volunteers play a vital role to use this website in real time system.

Software Requirements:

- Visual studio Basic : Bootstrap 4, HTML, CSS, JavaScript, C++
- XAMPP Control Panel :PHP-PhpMyAdmin database

Steps to run the website:

- Initially first XAMPP control panel from apache website. Then click the apache and MySQL start button
- Download the Zip file which is in the name ROTO.zip and extract it in the xampp/htdocs in the location
- Open the visual studio basics and choose the file->"open existing project" option then specify the extracted zip file location where you have located it and click that folder.
- After uploading it you right click the home file and open in the default browser, then you can see the project running in the windows.
- To see the values stored in the database you have to type localhost/phpMyAdmin and the click enter you can see the phpMyAdmin database.
- To see the money transactions type www.payumoney/merchanttranscation you can see the PayUMoney page where you can see the money transactions.
